PERSONAL CYBERSECURITY PORTFOLIO / 2026

CYBER WITH DARK

FURKHAN

Cybersecurity Student | Aspiring Security Analyst

Building practical knowledge in networking, Linux, Windows security, ethical hacking fundamentals and security operations.

THINK SECURE. LEARN DEEP. DEFEND SMART.

LEARN / PRACTICE / DOCUMENT

About Me

A learner building a foundation in cybersecurity.

I am a final-year B.Sc. Zoology student transitioning into cybersecurity. My learning journey focuses on understanding how networks, operating systems and applications work—and how to protect them.

I develop practical skills through structured training, guided exercises and authorized lab environments. I value careful documentation, ethical practice and continuous learning.

CURRENT FOCUS

Networking • Linux • Windows security • Security operations

CAREER DIRECTION

Developing toward entry-level cybersecurity and security analyst roles

WORKING PRINCIPLE

Practice only in systems and environments where I have permission

Technical Skills

NETWORKING

TCP/IP fundamentals
DNS • HTTP • SNMP
Network service discovery

OPERATING SYSTEMS

Linux and Kali Linux
Windows fundamentals
Processes and services

SECURITY BASICS

Reconnaissance concepts
Enumeration fundamentals
Security principles

BLUE TEAM

Log review and analysis
Anomaly detection basics
Monitoring concepts

WEB SECURITY

HTTP fundamentals
Web application security concepts
Common risk awareness

WORKFLOW

Git and GitHub
Technical documentation
Research and reporting

Skill level: foundational / actively developing. Listed areas reflect learning and lab exposure, not professional experience.

Learning & Training

REDTEAM HACKERS ACADEMY

Ethical hacking training with guided practical learning. Add course completion date and certificate details only if officially issued.

INE LEARNING

Hands-on learning across networking, Linux, Windows, reconnaissance and security operations fundamentals.

LEARNING THEMES

- Networking essentials and DNS concepts
- Linux and Windows system fundamentals
- Reconnaissance and service discovery
- Log anomaly detection and security monitoring

CERTIFICATIONS

No certification is claimed in this portfolio. Add only certifications you have officially earned; list training courses separately.

Hands-on Labs

Selected guided exercises completed in authorized learning environments.

NETWORKING & RECON

DNS Basics and Enumeration
DNS and Virtual Hosts
SNMP Recon Basics
Nmap Service Discovery

LINUX & WINDOWS

SOC-1 Linux Essentials
Windows Local Enumeration
Processes and Services
SOC-1 Windows Essentials

SECURITY ANALYSIS

Log Anomaly Detection Basics
NTLM Hash Cracking lab
File transfer to Windows targets
Git repository recovery exercises

Lab work is performed on training platforms or systems where authorization is provided. For each lab, document the objective, environment, key learning and evidence without publishing secrets or sensitive data.

Projects & Practical Work

PERSONAL NETWORK SECURITY LAB

Goal: document a small, owned test network.

Planned deliverables:
- Network diagram
- Device and service inventory
- Basic security controls
- Findings and improvement notes

LEARNING PROJECT CONCEPT

SECURITY LOG ANALYSIS

Goal: practice reviewing sample or lab logs.

Planned deliverables:
- Log source and context
- Notable events
- Investigation notes
- Defensive recommendations

LEARNING PROJECT CONCEPT

CYBERSECURITY AWARENESS

Goal: create clear educational material.

Planned deliverables:
- Phishing awareness guide
- Password and MFA basics
- Safe browsing practices
- Short awareness graphics

LEARNING PROJECT CONCEPT

These are portfolio project concepts, not claims of completed work. Update each card to “In Progress” or “Completed” only after the work and documentation exist.

Tools & Career Journey

TOOLS & PLATFORMS

- Kali Linux — security learning environment
- Nmap — network discovery and service enumeration
- Wireshark — network protocol analysis
- Git and GitHub — version control and portfolio hosting
- Windows and Linux — operating system fundamentals

DEVELOPMENT ROADMAP

FOUNDATIONS

Networking, Linux and Windows

PRACTICE

Authorized labs and structured exercises

DOCUMENT

Reports, projects and technical notes

GROW

Build deeper Blue Team and security skills

Career objective: continue developing practical skills for an entry-level cybersecurity / security analyst pathway.

CYBER WITH DARK / CONTACT

LET'S CONNECT.

Interested in learning, collaboration and entry-level opportunities in cybersecurity.
